COL de TENDE TUNNEL

FIRE PROTECTION for LEAD-IN SHAFTS

The owner, the **Alpes Maritimes DDE** (regional development agency), assisted by the prime contractor, **SCETAUROUTE**, carried out the work to ensure Tunnel safety in summer 2006. Fire resistance of lead-in shafts had to be provided in accordance with circular 2000-63 with an N3 level of insulation for a non-exposed surface temperature of less than 80 degrees. FIRE BARRIER 135 was installed in prefabricated sheets, 75 mm thick, with a fire-resistant seal round the edge.
